

Mobile Office scenario

The customer approached us with a bizarre request for a mobile office in their camper. They travel around the UK and Europe writing reviews of campsites and historic places.

Customer Requirements

- 100% mobile
- 4 /5G connectivity
- Printing Devices
- Remote Control of 2nd Device
- Wireless Keyboard & Mouse
- Easy to remove for travelling

We assisted in implementing this sleek arrangement, which consisted of an i7 Desktop PC with a 28 inch Smart TV that could be used for publishing and design and in the evenings used for TV and Netflix giving it a multi purpose use as well as being simply removed for travelling or when not needed.

We installed a power inverter for 240 volt that allows the peripherals to be used as they would be at home, installing this allowed us to simply use a Printer/Scanner device and a hidden Desktop PC as well as a Laptop we used a 4g router that would connect to any mobile network.

Update:

We now have fitted Starlink internet technology to give him more access to the internet in remote locations for faster speeds.
